

## DK32 DK34 DK37

### Technical Datasheet

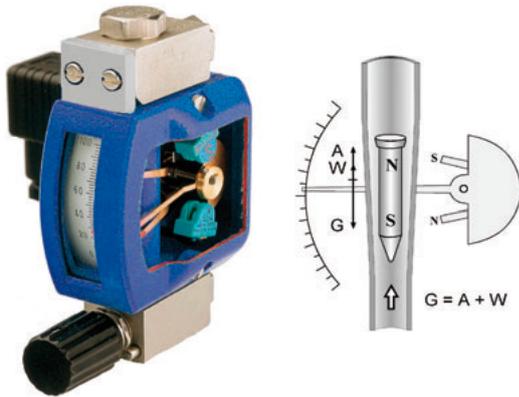

#### Variable area flowmeter

- Rugged design for extreme operating conditions
- Local indication without the need for auxiliary power
- Excellent long-term stability
- Flexible and can be adjusted to meet customer-specific requirements
- Highly resistant to pressure and temperature

## The solution for all-metal flowmeters

DK all-metal flowmeters are suitable for measuring the volumetric or mass flow rate of liquids, gases and vapors. Thanks to their rugged design, the flowmeters are especially suitable for difficult operating and environmental conditions.

### Highlights

- DK32 with horizontal connections - with valve
- DK34 with vertical connections - without valve
- DK37 with higher degree of measuring accuracy and larger display
- DK37 with vertical connections - without valve
- Slim design allows high packing density
- Simple installation and start-up
- Corrosion-resistant
- Low maintenance

### Industries

A universal meter for all industries, such as:

- Chemical
- Heating, Cooling and Air-conditioning
- Iron, Steel & Metal
- Electronics
- Oil & Gas
- Petrochemistry
- Power Plants
- Machinery
- Paper & Pulp
- Water

### Applications

- Fine-dosing
- Gas chromatography
- Monitoring and control of minute quantities
- In conjunction with a differential pressure regulator: helps maintain constant flow rates with fluctuating inlet or outlet pressure

## The all-metal product family

### DK metal variable area flowmeters

For flow rates greater than 0.15 l/h water and 1.6 l/h air:

- ① DK32 with max. two limit switches, NAMUR or open collector or floating type reed contact
- ② DK32 with max. two limit switches, NAMUR or open collector or floating type reed contact
- ③ DK37/M8M with max. two limit switches, NAMUR or open collector
- ④ DK37/M8E - 4...20 mA current output and bar chart display - HART™ communication

For higher flow rates up to 120m<sup>3</sup>/h water and 2800m<sup>3</sup> air

### H250 variable area flowmeters

- ① H250/RR/M9
  - Local indication without the need for auxiliary power
  - max. 2 limit switches, type NAMUR, NAMUR intrinsically safe or 3-wire open collector
  - 2-wire current output 4...20 mA, HART™ or Profibus communication
  - 6-digit flow totalizer (non-Ex)
- ② H250/RR/M10
  - Explosion proof terminal housing Ex d
  - 2 digital adjustable limit switches, 2-wire open collector or type NAMUR
  - 2-wire current output 4...20 mA, HART™ communication
  - Pulse output up to 10Hz (also for electromechanical counters)
  - 12-digit flow totalizer with external reset (batch operation)
- ③ H250/RR/M8M
  - Slim design allows high packing density
  - Local indication without the need for auxiliary power
  - 2 limit switches, 2-wire type NAMUR or NAMUR intrinsically safe
- ④ H250/RR/M8E
  - Slim design allows high packing density
  - 2-wire current output 4...20 mA, HART™ communication

## Differential pressure regulators

Differential pressure regulators are used (only DK32 and DK37) to help maintain constant flow rates at fluctuating inlet or outlet pressures. Minimum pressure levels are required to permit operation of the regulators (see regulator characteristics).

Differential pressure regulators are not pressure reducing valves!

### Inlet pressure regulators, type RE, NRE

The regulators help maintain a constant flow rate at variable inlet pressure and constant outlet pressure.

Example: inlet pressure regulator RE-1000:	Current flow rate:	1000l air
	Constant outlet pressure:	1.013 bar abs.

With a variable inlet pressure greater than 0.5 bar the flow rate  $Q_v$  in the device remains constant.

### Outlet pressure regulators, type RA, NRA

The regulators help maintain a constant flow rate at constant inlet pressure and variable outlet pressure. In order to function, the outlet pressure regulator requires a specific minimum pressure difference between inlet and outlet pressures. Inlet pressure  $p_1$  must always be greater than outlet pressure  $p_2$ .

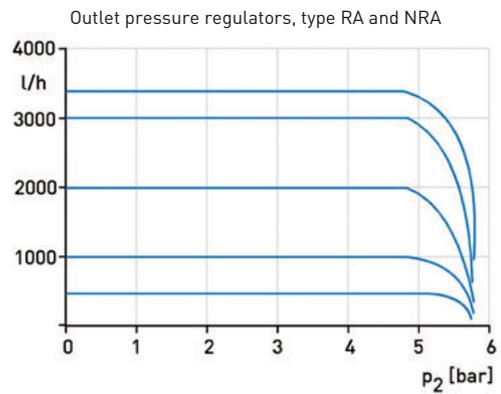

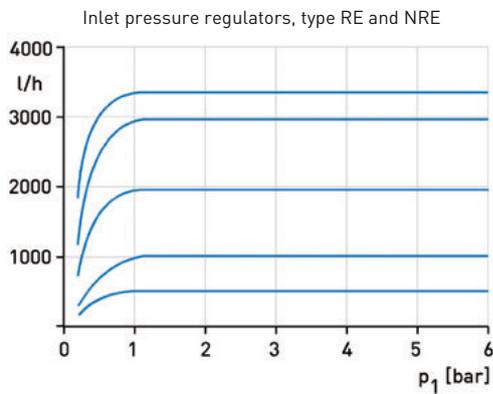

Example: outlet pressure regulator NRA-800	Current flow rate:	800l air
	Constant inlet pressure:	3 bar

With a variable outlet pressure of 0...2.9 bar the flow rate  $Q_v$  in the device remains constant.

### Adjustment ranges
